DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on 5/11/2006 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) The invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Kawada et al. U.S. Patent No. 6,836,085.

Referring to claim 1, Kawada et al. discloses a method and apparatus for controlling an electric vehicle in which a current is supply to a winding of a fixed phase and a braking force is generated by short circuit (see all figures and respective portions of the specification). Kawada et al. further discloses a synchronous motor

Art Unit: 2837

(14) with armature winding (u, v, w) and a rotor (not shown), connected to a power converter (13), wherein a short circuit current is regulated by a pulse width modulation generator (39) to cause the motor to brake, depending on the difference between the set point value of the short circuit current corresponding to the set point value of the braking moment (measure by braking resistors, x,y,z) and the actual value of the short circuit current (16) (see figures 2, 3-6 and Cols. 6-8).

As to claims 2 and 3, Kawada et al. depicts from figure 2, a power converter (13) having half bridge (Tru, Trv, Trw) for positive half wave and half bridge (Trx, Try, Trz) for negative half waves of the current, wherein the switches short the armature windings and are triggered by way of a closed loop control device (39). Moreover, since a pulse width modulation is regulating the short circuit the triggering of the windings can be in an alternating fashion (on, off).

Allowable Subject Matter

4. Claim 4 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

5. The prior art made of record in form 892 and not specifically relied upon is considered pertinent to applicant's disclosure to further show the state of the art.
